-I- FUNCTION: URF2 PRODUCT MAY BE INVOLVED IN THE TRANSFER OF IRON-
SULFUR CLUSTERS TO THE NADH DEHYDROGENASE COMPLEX. IT MAY ALSO
BE REQUIRED FOR THE ASSEMBLY OF THE NADH DEHYDROGENASE COMPLEX.
-I- SIMILARITY: SIGNIFICANT TO ORF3 OF P.DENITRIFICANS (LOCATED
BETWEEN THE COX11 & COX111 GENES).

MPsrch_pp in on: protein - protein database search, using Smith-Waterman algorithm Tue Apr 20 14:05:20 1999; MasPar time 4.35 Seconds 80.112 Million cell updates/sec

Description: Perfect Score: Title: >US-08-836-455-1_1 (50-56) from trans.pep (2 of 3) 62 1 GINLHWL 7

abular output not generated.

Scoring table:

Sequence:

PAM 150 Gap 11

Searched: 165420 seqs, 49795644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

isp_archea 2:sp_bacteria 3:sp_fungi 4:sp_human 5:sp_invertebrate 6:sp_mammal 7:sp_mhc 8:sp_organelle 9:sp_phage 10:sp_plant 11:sp_rodent 12:sp_unclassified 13:sp_vertebrate 14:sp_virus

Statistics: Mean 23.380; Variance 35.189; scale 0.664

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 15.830; Variance 48.580; scale 0.326

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC protein PrP-Sc in situ. Prions are infectious pathogens that cause CC central nervous system spongiform encephalopathies in humans and animals. The scrapie isoform of the prion protein (PrP-Sc) is necessary for both the transmission and pathogenesis of the transmissible neurodegenerative CC diseases of animals and humans. The antibodies can be used in a method of specifically bind to prion proteins associated with disease and do not CC bind to denatured PrP proteins not associated with disease. They can bind to the prion proteins of a specific species of mammals. They can also have CC the ability to neutralise infectious prions. The antibodies can be used for screening for the presence of prions in products such as CC neutralisation to purify products, for extraction of prion proteins or commentics. They can also be used for therapy, for diseases such as bovine spongiform encephalopathy, CC Serstmann-Strassler-Scheinker Disease, scraple or feline spongiform comentalismanthies.

Example 1; Fig 2; 100pp; English.
The present sequence is the light chain variable region of the murine anti-human cancer antigen antibody (Ab) NR-LU-13.
A novel humanised Ab (hAb) binds the antigen bound by NR-LU-13. hAb specifically NRX451, or its conjugates can be used for the manufacture of a diagnostic or medicament for cancer diagnosis of treatment. The hAb has reduced immunogenicity and toxicity in humans, but retains the ability to bind the NR-LU-13 antigen.

CC Inis polypeptide sequence comprises a consensus sequence of murine CC light chain variable regions (VL) selected on the basis of identity CC light chain variable regions (VL) selected on the basis of identity CC light chain variable regions (VL) selected on the basis of identity CC light chain variable regions (VL) selected on the basis of identity CC light chain variable regions (VL) selected on the basis of identity CC light (NC) Sequences were obtained from a GenBank database capacity of the consensus (W27122) was also produced. 11D10 has at CC chain and 11 in the heavy chain). 8 Occur within CDRs and 10 CC cutside CDRs. 11D10 polypeptides and polynucleotides can be CC used in vaccines and pharmaceutical compositions for the treatment CC of human milk fat globule-associated diseases such as breast

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       display package.

Pri display package.

Example 46; Fig 52; 109pp; English.

Comment specific for both hen and turkey egg lysozyme (HEL and TEL).

The sequence is the light chain of clone MIF encoding an scFv fragram ent specific for both hen and turkey egg lysozyme (HEL and TEL).

The DNA encoding the chain was amplified from a cDNA library prepd.

Comment specific for both hen and turkey egg lysozyme (HEL and TEL).

The DNA encoding the chain was amplified from a cDNA library prepd.

Compare the spleen of an unimmunised mouse. The corresponding heavy chain was also amplified from an existing construct, pSW1-VHD1.3

Compare an scFv construct which was ligated into the fdCAT2

Covector for expression on the surface of fd bacteriophage. In this way, the VL domain was replaced by a library of VL domains to allow for selection of a broader range of antibody specificities. Several colones were isolated which bound to TEL (the parent antibody D1.3 colones were isolated which bound to TEL (the parent antibody D1.3 colones were isolated which bound to TEL (the parent antibody D1.3 colones were isolated which bound to TEL (the parent antibody D1.3 colones were clones, MF1 and M21 are given in R21310 and R21311

Compared these clones, MF1 and M21 are given in R21310 and R21311

Compared the sequences of the light chains of two of these clones, MF1 and M21 are given in R21310 and R21311

Compared the sequences of the light chains of the light chain is given in R21309.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2. "Phenyll-5-oxazolone (phbx). It was prepd. using cDNA generated of from mRNA from mice immunised with phbx coupled to chicked serum albumin. The VH and VL kappa sequences were separately amplified by PCR (see 023474-84) and ilyated into fdCAT2 (see 023463) for expression on the phage surface as fusions with gene III. The resultcing library of clones was diverse. Twenty three hapten binding clones were sequenced revealing eight different VH genes (A-H) (see R21264-71) in a variety of pairings with the seven different VK genes (a-g). Of the twenty three clones sequenced, three were of type "a", and were "ox-like" genes. (See Berek et al, Nature 316 ctype "a", and were "ox-like" genes. (See Berek et al, Nature 316 ct 12-418, 1985). They contain the DXGXX motif in CDR3, the central CC clones were Vk-d combinations. The Kd of VH-B/Vk-d for phbx-GABA CC was 10 nM. Only two other combinations (of eleven tested) were CC fragments having weak affinities can be selected with antigen, prochase of the avidity of the multiple antibody heads on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 100.0%;

The CC antibodies of the invention are able to bind the scrapic isoform of prion CC central nervous system sponsitions are infectious pathogens that cause CC The scrapic isoform of the prion protein [Prior CC diseases of animals and humans. The antibodies can be used in a method of diseases of animals and humans. The antibodies can be used in a method of CC specifically bind to prion proteins associated with disease and do not to denatured prior proteins not associated with disease and do not to prion proteins of a specific specific with disease. They can bind to denatured prior proteins not associated with disease and do not the ability to neutralise infectious prions. The antibodies can be used for screening for the presence of prions in products such as prior therapy, for diseases such as bovine sponsiform encephalopathy, serstmann-Strassler-Scheinker Disease, scrapie or feline sponsiform encephalopathy, serstmann-Strassler-Scheinker Disease, scrapie or feline sponsiform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     နှင့်

The conjugate is capable contains at least one antigen confident to accomply at one conjugates are useful as vaccines and are able to elicit an enhanced immune response without the use of an adjuvant. Consider anti-numan class I monoclonal antibody secreted by hybridoma conditions and specific example, a conjugate was constructed using the murine consists of a tandemly linked T and B cell epitope derived from HIV MN strain. Consists of from 44H104 which was used in the preparation of a conjugate with

Murine anti-human class II monoclonal antibody 44H104 VL chain.
Antibody: light chain; variable region; hybridoma cell line 44H
immune response; enhance; stimulate; vaccine; immunodiagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acid residues was determined. This information can be used in a method to determine how to modify a rodent antibody or fragment by resurfacing in order to produce a humanised rodent antibody. Residues (determined from alignment) at positions 1, 3, 5, 9, 15, 18, 46, 47, 51, 63, 66, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 86, 73, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-JUN-1996; CA0400.

                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                        В
                                                                                                                                                                                                                                  This polypeptide sequence comprises the light chain variable region (VL) of monoclonal anti-idiotype antibody lillio produced by hybridoma cell line ATCC 12020. Illio was obtained by immunising the hybridoma cell line ATCC 12020. Illio was obtained by immunising contained mice with MC-10 anti-HMFG antibody to obtain an anti-idiotype cresponse. It elicits an immune response against a specific epitope of a high mol.wt. mucin of human milk fat globule (HMFG). It induces an immunological response to HMFG in mice, rabbits, monkeys and patients with advanced HMFG-associated tumours. Pharmaceutical compositions and vaccines comprising Illio, lillio polypucleotides (see also T85149-50) are claimed.

CC and/or lillio polypucleotides (see also T85149-50) are claimed.

CC Also claimed are diagnostic kits and methods of using 11D10, 11D10 polypeptides and/or lillio polypucleotides, including methods of treating HMFG-associated tumours. Illio is also used in a claimed content of palliating HMFG-associated disease and in claimed kits to detect or quantify anti-HMFG antibody.
                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The preciprocal develops and the invention has a double-stranded DNA seq. coding for a variable region of a light or heavy chain of IgG, or for a variable region of a light or heavy chain of a immunoglobulin specific for an enzyme or surface protein. The sequence esp. codes for a variable region of a light chain having 9: 115 AAs or for a variable region of a heavy chain having 10-125 AAs sequence 146 AA;
N-PSDB; 736880.

Compsns. contg. antigen-targetting antibody fragment const comprising dimer of single-chain Fv fragments
Example 1; Columns 33-36; 30pp; English.

Variable heavy (VH) and variable light (VL) genes were clo
a 520C9 hybridoma cDNA library, using probes directed towa
antibody constant and joining regions. A two single chain
gene was constructed by connecting the VH and VL genes wit
Ser rich polypeptide linker. The resulting 520C9 two sFv g
which encodes the present sequence, was inserted into an e
                                                                                                                                                                                                                                                                                                                                              09-JUL-1996.

520C9 anti-c-erbB-2 two single chain Fv construct.
520C9; anti-c-erbB-2 monoclonal antibody; single chain Fv; sFv construct; polypeptide linker; C-terminal amino acid sequence; In vivo imaging; drug targetting experiment; homodimer; increased; binding avidity; tissue retention time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  region

                                                                                                                                                                                                                                                                                                                                         I antigen for imaging or treating breast or ovarian cancer etc.

Claim 4; pages 60-61; 87pp; English.

C c-erbB-2 refers to a protein antigen expressed on the surface of the control of about 5.3 (see 046083, R39568). A single chain Fv (sFv) of about 5.3 (see 046083, R39568). A single chain Fv (sFv) is a covalently linked VH-VL heterodimer which is expressed from a gene fusion including VH- and VL- encoding genes connected by a peptide-encoding linker. Such linker sequences are set forth in AA residues 116-135 in R39569, which includes part of the 16 AA linker sequences in R39572. Using 046084 for the 520C9 monoclonal antibody, a single chain polypeptide can be produced having a binding affinity for a c-erbB-2 related antigen. 'X' in R39569 are fers to the location of a stop codon in 046084.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vector, transformed into E. coli, and protein expression induced by the addn. of IPTG to the culture medium.

A compsn. comprising a carrier and the 2 sFv protein prod. can be used for in vivo imaging, and drug targetting experiments. The 2 sFv protein prod. is a homodimer, in which both fragments target the same antigen, therefore giving greater binding avidity and longer tissue retention times, compared to individual sFv protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New single chain Fv polypeptide binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 93-272889/34.

Humanised antibody binds same human cancer antigen as antibon NR-LU-13 - useful for pre-targeting methods, conventional at therapy and immunodiagnosis Example 1; Fig 3; 100pp; English.
The present sequence is the light chain variable region of humanised murine anti-human cancer antigen antibody (Ab) NR
                                                                                                                                                                                                hAb, specifically NRX451, or its conjugates can be used for the manufacture of a diagnostic or medicament for cancer diagnosis treatment. The hAb has reduced immunogenicity and toxicity in humans, but retains the ability to bind the NR-LU-13 antigen.
                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                              A novel humanised Ab (hAb) binds the antigen bound by NR-LU-13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  07-JUN-1996; US-660362.

PT comprises monoclonal anti-CD4 antibodies and monoclonal anti-IL2R beta antibodies

PT comprises monoclonal anti-D4 antibodies and monoclonal anti-IL2R beta antibodies

PS (laim 6; Page 13; 18pp; German.

CC This sequence is the light chain variable region of a preferred

CC anti-IL2R alpha monoclonal antibody for use in the claimed

CS (SCACC 90071905). The anti-IL2R alpha antibody is used with at least

CC one anti-CD4 antibody. Individually the antibodies are strongly

CC (ECACC 90071905). The anti-IL2R alpha antibodies are strongly

CC (ECACC 90071905) and when used together their immunosuppressive properties

CC are improved; they synergistically inhibit T-helper cell

CC proliferation to effectively inhibit transplant rejection at low

CC doses without significantly reducing the general immune response.

CC See Q36607-Q36616.

Scoring table: PAM 150 Gap 11

Searched: 74019 seqs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swissprot

Statistics: Mean 28.762; Variance 43.396; scale 0.663

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TISSUE SPECIFICITY: EXPRESSED IN COTYLEDONS, ROOTS AND LEAVES.

DEVELOPMENTAL STAGE: MAXIMUM EXPRESSION IN COTYLEDONS THAT JUST

EMERGED FROM THE SEED COAT. LOW LEVELS IN HYPOCOTYLS AND

INCREASING LEVELS IN ROOTS THROUGHOUT THIS PERIOD OF DEVELOPMENT.

SIMILARITY: BELONGS TO THE UDP-GLYCOSYLTRANSFERASE FAMILY.
